

ASSIGNMENT-3

Develop a code to upload the water tank level and light intensity values to the IBM IoT platform and visualize them in the web application.

Node Red Architecture:

Python Code:

```
from wiotp.sdk.device import DeviceClient
import random
import time
config = {
    "identity":{
        "orgId":"8vprpv",
        "typeId":"First",
        "deviceId":"1"},
    "auth":{"token":"12345678"}
}
def callBackFunc(cmd):
    data = {
```

```

        "water_level":cmd.data["water_level"],
        "light_intensity": cmd.data["light_intensity"]
    }

    print(f"Data acknowledged from cloud: \n\n{data}")

print("\n=====
\n")

client = DeviceClient(config=config)

client.connect()

while True:

    data = {

        "water_level":random.randint(2,10),
        "light_intensity": random.random()

    }

    print("=====
\n")

    print(f"Data uploaded to cloud: \n\n{data}\n")
    client.publishEvent("upload",msgFormat="json",
    data=data)

    client.commandCallback = callBackFunc

    time.sleep(15)

    client.disconnect()

```

Working Prototype:

1. Python Console Output

```

PS D:\Personal\Projects\IoT\Assignment 6> cd ..
PS D:\Personal\Projects\IoT> cd '..\Assignment 3\'
PS D:\Personal\Projects\IoT\Assignment 3> py .\assignment_3.py
